

Unit 1: Introduction to Electricity

This unit will take approximately 2-3 weeks. The pace is always determined by the ability of your students. Some areas can be skipped or used as enrichment, while other areas include more challenges to those more advanced students.

This timeline is based on 55-minute periods.

Outline	Teacher Notes:
Day 1	Whiteboard Framing Questions, but don't spend a lot of time.
<i>Today's Objective</i> : This introduces a context for learning basic	You want students to begin thinking about electricity.
electricity.	Identify new vocabulary.
Activity: Framing Questions - Whiteboard	Make sure to look at the Student Misconceptions Electricity Page.
<i>Lab:</i> Getting Charged Lab	You might identify some common misconceptions that you'll be
Due: None	dealing with throughout the unit.
Day 2	Have students' whiteboard their observations. Review the
<i>Today's Objective</i> : To identify the charges that are involved in	Reading Page: What is Static Electricity after students discuss
static electricity and how they relate to each other.	their findings from the Getting Charged Lab.
<i>Lab:</i> Getting Charge Lab - Revisited	If you want to take it farther, there is a link to explain more about
<i>Practice</i> 1.1 Electrical Charges	charging by Conduction and Induction at the bottom page 2 of the
Due: None	lab.
Day 3	Review the Practice 1.1 Electrical Charges. You can do this
<i>Today's Objective</i> : To identify the components required to	through class discussion, or whiteboarding. In either case, don't
complete a circuit.	spend a lot of time on it as you will want to do the next Lab.
Activity: Review Getting Charge Lab-Revisited	Be sure to cover the learning objectives from the Teacher Guide.
Lab: A Bulb, A Battery and A Wire	Assign the Reading Pages along with the Practice 1.2 as
<i>Practice</i> 1.2 The Bulb Challenge	homework.
Due: Practice 1.1	
Day 4	Have students display their answers from Practice 1.1 on their
<i>Today's Objective</i> : To convert physical diagrams to circuit	whiteboards from their tables. This is a more informal but faster
elements. To identify which materials are conductors and which	method to review homework yet still reinforce the student
are insulators.	objectives.
<i>Activity</i> : Review the components required to produce a complete	Show student how circuit elements can be used to draw a circuit.
circuit.	In their groups, students should discuss and design a lab to
Lab: Electrical Materials Lab	identify which materials can (or can not) conduct electricity.
Due : A Bulb, A Battery and A Wire	This may be the first formal lab write up and may take more class
	time depending on the detail you expect from the students.

Outline	Teacher Notes:
Day 5	Review their Student Summary Page, and everything they have
<i>Today's Objective</i> : To complete the Electrical materials lab if	learned thus far.
you didn't finish. To review everything covered throughout the	Electricity <i>Quiz #1</i> . Use questions from the labs covering charges
week.	and static electricity, components of a light bulb, contact points,
<i>Activity</i> : Review content covered throughout the week through	circuit elements, conductors and insulators.
group discussion and/or class discussion	Make a point to identify that we haven't discovered how electricity
<i>Due</i> : Electrical Materials Lab	travels through a circuit.
Day 6	This lab identifies that electricity does have a flow or current and a
<i>Today's Objective</i> : To discover how electricity travels through a	direction as it travels through a circuit, but it cannot identify which
circuit.	way it travels, ie From the positive side of the battery through he
<i>Lab:</i> The Buzzer and the Motor Lab	circuit to the negative side or visa versa. The Reading Page: "What
<i>Practice</i> 1.3 Flow Challenge – in Class	is Charge? What is Current?" will clear that up.
<i>Practice</i> 1.4 Current through Devices	After reviewing the Flow Challenge, Assign the Practice 1.4 Current
<i>Due</i> : None	through Devices as homework.
Day 7	Review the Practice 1.3 Flow Challenge.
<i>Today's Objective</i> : To construct a circuit using a switch and	In their groups, have students' whiteboard their answers from
identify the applications of several different switches.	problem #2.
Activity: Whiteboarding 1.3 Flow Challenge	You will be introducing a variety of switches. Throughout class,
<i>Lab:</i> Bulbs and Switches Lab	you'll want to have students identify the applications of these
<i>Practice</i> 1.5: Circuits with a Switch	various switches.
<i>Due</i> : The Buzzer and the Motor Lab, Practice 1.3, and Practice 1.4	At the end of the lab, review the Reading Page: The Switch.
	The practice page appears lengthy, but it's relatively easy.
Part 3 is optional. This can get confusing to design, but it has a	Depending on the ability of your class, you may want to skip part 3,
practical application that can be discussed in class.	or simply discuss how switches can be used in stairways, hallways
	or front/back door buzzers.
Day 8	Practice 1.5 is a fairly easy assignment and shouldn't require any
<i>Today's Objective</i> : To determine how LED's and photoresistors	review.
work and their function in every day life.	Because the use of LED's and photoresistors are very common, and
<i>Lab:</i> Electrical elements Application Lab	there are many of practical applications.
<i>Due</i> : Practice 1.5 Circuits with a Switch	Now is a good time for Electricity Quiz #2 .
	The next lab activity may take a few days and after which the unit is
	finished. Use questions from Practices 1.3,1.4 and 1.5 as well as the
	lab questions

Outline	Teacher Notes:
Day 9	As a class, go through Part 1 making sure that everyone
Today's Objective: To identify all the materials required in	understands how to properly use the multimeter.
assembling a fruit or vegetable battery.	In part 2, use common electrodes such as Copper, Aluminum, and
To accurately measure the voltage using a multimeter.	Brass (all found at a hardware or welding supply store), and Zinc
<i>Lab:</i> The Everyday-Stuff Battery Lab Part 1 and 2	(galvanized nails). As a class, list out all the different combinations
Due : Electrical Elements Application Lab	of electrodes you can produce.
	Common electrolyte materials are apples, potatoes, oranges,
	lemons, onions, etc.
Day 10	Since students have done Part 1, the second part should go a lot
<i>Today's Objective</i> : Part 3 of the Everyday-Stuff Battery Lab.	smoother. The same principles apply here, only the electrolyte will
Lab: Part 3	be changed. These can be soda, saltwater, Gatorade, lemonade, tap
Due: None	water, etc. In this lab, students will only use the best combination
D 44	of electrodes discovered in Part 1.
	It's usually best to do Part 4 of this lab as a class. Getting several
Loday S Objective: Part 4 of the Everyday-Stuff Battery Lab	people involved (in series) can be very informative.
Lub: Everyday-Stull Ballery Lab Part 4	ose questions from the previous practice pages and include
Practice 1.6 Battery Chantenge	questions about what they discovered about batteries.
Day 12	Show students the Reading Page: How De Batteries Work?
Day 12 Today's Objective: To review batteries their components and	Insort practical applications and why there are so many different
how they work	sizes and types of hatteries
Activity: Review the Reading Page: How Do Batteries Work?	This is also a good time to show an open 6V lantern battery and a
Practice 1.6 Battery Challenge	9V hattery.
Due : Everyday-Stuff Battery Lab	, v buccery.
Dav 13	Whiteboard the Practice 1.6.
<i>Today's Objective</i> : To review Unit 1: Intro to Electricity	Students may still have some misconceptions about batteries and
Activity: Class discussion	this is a good time to clear them up. Use the rest of the hour to
Due : 1.6 Battery Challenge	review the unit.
Day 14	Test on Unit 1: Intro to Electricity
Today's Objective: Unit Assessment
